

## **Naval Installation Restoration Information Solution (NIRIS)**

*Robert Sadorra, U.S. Navy NAVFAC Environmental Cleanup*

Naval Facilities Engineering Command (NAVFAC) Environmental Business Line has deployed a web-based centralized GIS database for their multi-million dollar Environmental Restoration Program (ERP). NIRIS (Naval Installation Restoration Information Solution), is being implemented across all NAVFAC offices and will be used by Navy and contractors to manage, evaluate, and visualize data, documents and records, for Navy and the Marine Corps sites. NIRIS manages all ERP analytical and spatial data, which includes the Munitions Response and Installation Restoration Program (Navy's Superfund/CERCLA program) data, ensuring institutional memory is preserved, land use controls are maintained, and remedial actions are effective. This presentation will provide a quick overview focusing on 1) Need for NIRIS 2) NIRIS Data Management Tools 3) NIRIS Data Utilization Tools.
